

MAGIC™ Technology

High dynamic Range
logarithmic CMOS
Sensor

Wide VGA, Wide Dynamic Range Imaging CMOS Sensor,
CLCC package

Ease your design with Native WDR™

Key Features

- **Native WDR™:** Intrinsic wide dynamic range – no knee points to setup – no multiple exposures – 120 dB in a single shot.
- **Highest** dynamic range in the market thanks to its patented Solar Cell pixel structure
- **Wide-VGA** resolution (768*576), 10 µm Square pixels, 9.6mm diagonal
- **Internal FPN compensation** results in no noticeable FPN even at low intensity
- **37 MHz max pixel clock**, can operate with any pixel clock resulting in a fully programmable frame rate
- **Ultra Low power consumption** : less than 230 mW full frame

Applications

- Industrial Machine Vision
- Solar panel inspection
- Automotive vision
- CCTV/IP surveillance cameras
- Intelligent Transportation Systems
- Biometric and medical imaging

NSCo8o6 is a Wide-VGA (768x576 active pixels) **high dynamic range** CMOS image sensor which benefits from NIT patented Solar Cell pixel structure. **NSCo8o6** offers a true logarithmic response versus optical illumination without saturation with more than 120 dB true dynamic range.

The logarithmic response is intrinsic to the sensor thanks to the Solar Cell pixel structure, therefore there is no need to program any register or change setup according to illumination conditions. Moreover **NSCo8o6** delivers a **stable contrast indexed image** that is independent of the ambient illumination. **NSCo8o6** operates in rolling shutter mode.

Technical Specifications
